I. Background

The workplace climate survey was conducted as a strategic action to obtain an objective view of employees' perceptions regarding working conditions, leadership practices, internal communication, teamwork, and the factors that influence motivation and well-being. In recent months, needs were identified to strengthen organizational alignment and reinforce an environment of trust. For this reason, it was necessary to have up-to-date and measurable information that would allow the company to make evidence-based decisions, prioritize interventions, and monitor the effectiveness of the actions implemented.

This study also responds to the institutional commitment to promote a healthy, productive and respectful working environment, ensuring that internal processes and the organizational culture remain focused on continuous improvement. The survey makes it possible to detect strengths that should be preserved and replicated, as well as areas of opportunity that may be affecting satisfaction, performance and retention. In this way, the organization has a comprehensive diagnosis that serves as the basis for building action plans by area, establishing follow-up indicators and encouraging the active participation of teams in improving the work climate.

Finally, this exercise is framed within the intention to consolidate more consistent and people-centered people-management practices, especially in a context of organizational growth, operational changes and the integration of new leaders. Having this measurement helps to anticipate risks associated with turnover, absenteeism or demotivation, and to reinforce conditions that favor a sense of belonging and the achievement of business objectives, keeping people's well-being and the quality of labor relations at the center.

II. Introduction

Workplace climate is a direct reflection of how people perceive and experience, in their daily work, leadership practices, communication, recognition, stability, working conditions and institutional support. In industrial organizations—where coordination between processes, shifts and teams is critical for quality, safety and productivity—understanding these perceptions provides information not only about well-being, but also about factors that influence performance, turnover, absenteeism and the culture of prevention.

With this purpose, **JAROPAMEX Plant 3, Sabinas** site, carried out the workplace climate survey for the period December 2025, using a structured instrument based on affirmative statements that capture the level of satisfaction and agreement of collaborators regarding specific organizational practices. The survey uses a four-option response scale, which makes it possible to obtain clear, comparable and actionable readings for each area and shift.

A = Strongly agree

B = Agree

C = Disagree

C= Strongly Disagree

The statements are organized into key workplace-climate dimensions and aligned with a safe work environment and psychosocial risk-prevention approach. In particular, the instrument integrates components of a safe work environment linked to compliance with NOM-035, as well as aspects of job security, fair compensation, open communication, employee participation, recognition and reward, training and development, work–life balance, career progression and employee support. This set of dimensions makes it possible to assess both cultural factors and concrete operating conditions and practices in a balanced way.

In the safe work environment dimension, the survey explores the perception of whether physical safety is truly prioritized through consistent practices and leadership action when facing risks associated with harassment, excessive overtime, high workloads, turnover or training gaps. The job

security dimension examines the level of confidence in employment stability and in the institutional efforts to reduce turnover. The fair compensation dimension evaluates perceptions of wages and benefits compared with industry standards.

The open communication dimension includes both the flow of information about the state of the business and the perception of fair treatment from key leadership roles: plant manager, production manager, HR manager, supervisors and team leaders. Employee participation considers the extent to which personnel are involved in decisions and improvement initiatives; recognition and reward measures the regularity with which contributions to quality and operations are acknowledged; and training and development review the sufficiency of training and resources for building critical skills. Work-life balance assesses the reasonableness of shift patterns, overtime, and the respectful handling of absenteeism and time off. Finally, career progression and employee support look at growth paths and accessible resources such as counseling or assistance programs for personal and work-related challenges.

The results of this survey make it possible to identify strengths that should be maintained and expanded, as well as areas of opportunity that require immediate or gradual intervention. Analysis by dimension, area, position, line and shift provides evidence for prioritizing actions with a preventive focus and high impact on the employee experience. In this way, the organization can strengthen leadership consistency, operational clarity, day-to-day recognition and balanced workload management, contributing to a safer, fairer and more sustainable environment from both a human and productivity perspective.

III. Objectives

To assess the workplace climate at JAROPAMEX Plant 3, Sabinas site, using affirmative statements, in order to identify strengths and areas for improvement and to implement priority actions that strengthen a safe, healthy and productive work environment.

Specific Objectives

- Measure employees' perceptions in the key workplace-climate dimensions in order to detect strengths and opportunities for improvement.
- Analyze differences by area, shift, position, line and type of contract to better target actions.
- Generate concrete inputs for an action plan with goals and monitoring indicators

IV. Scope

The workplace climate survey was designed to provide an integrated and representative view of employees' experience at the plant.

Main elements of the scope are summarized below:

Element	Description
Evaluation	Workplace climate survey using 23 affirmative statements .
Population	Employees with an active employment relationship and more than four months of service. • 2936 • 1582 women • 1354 men
Coverage	Operational and administrative support areas that directly or indirectly influence employees' experience.
Areas	• Production • Quality • Materials • Management • Maintenance • Programs, Systems • Human Resources • Import/Export • Administration • Continuous Improvement • Manufacturing • Engineering • Finance • Safety • Health and Environment

Element	Description
Positions	• Sewing operators • Cutting operators • Leaders • Flexible operators • Inspectors • Clerks • OC technicians • Material handlers • Forklift drivers • Supervisors • Superintendents • Managers • Engineers • Analysts • Administrative staff • Generalists • Mechanics • Programmers • Planners and other positions.
Areas excludes	External contractors with no direct employment relationship, temporary service providers not integrated into the internal structure, and locations other than the one evaluated.
Types of personnel	• Direct • Indirect • Salaried staff
Shifts	• First • Second
Factors (Dimensions)	• Safe working environment • Job security

Element	Description
	• Fair compensation • Open communication • Employee participation. • Recognition and reward • Training and development • Work-life balance • Career advancement • Employee support
Purpose	To define action plans by organization/area/position/shift, prioritize interventions, strengthen leadership, improve communication and recognition, manage workloads and establish a baseline for future measurements
Study limits	Results are based on perceptions during the evaluation period and should be complemented with indicators of turnover, absenteeism, safety and productivity.

V. Work Plan

A four-week work plan was defined to implement the survey in an orderly manner, with clear communication, quality control of the instrument and timely delivery of results by dimension, area and shift. The schedule can be adjusted according to headcount, number of shifts and application logistics.

The main phases include: review, adaptation, application, processing, analysis, definition of actions and communication of results. The original Gantt chart from the Spanish report can be used as a visual reference for the timeline.

Work plan

Phase	Objective	Activities	Deliverables
Review	Confirm scope, objectives, and conditions of application.	• Review of objectives and scope. • Validation of eligible population, areas, and shifts. • Review of operational calendar (production peaks). • Definition of responsible parties and monitoring committee.	• Approved technical scope. • List of eligible population. • Preliminary schedule.
Adequacy	Adjust communication tools and materials to the context of the center.	• Adjusting wording and examples to internal language. • Validating scale, instructions, and confidentiality. • Uploading the instrument to the platform. • Designing a communication campaign and guidelines for implementation by shift. • Brief pilot test (if applicable).	• Final authorized instrument. • Answer sheet. • Presentation. • Pilot and adjustments.
Application	Conduct the survey, ensuring coverage by area and shift.	• Official launch of the survey. • Response windows in shifts. • Daily monitoring of participation. • Reminders and controlled closure.	• Participation record. • Attendance lists. • Preliminary response database.

Processing	Debug database and generate quantitative and qualitative analysis.	• Data cleaning and validation. • Calculation of overall and dimension-specific indices. • Segmentation by area, shift, gender, and job level.	• Refined database. • Results tables.
Analysis	Review the results in depth	• Analysis of open comments (recurring themes). • Identification of key findings and areas of risk.	• Preliminary findings. • Inputs for action plan.
Actions	Take the necessary measures to improve all key aspects, or at least the most urgent ones.	• Implement actions at the organizational, departmental, and position levels in order to design the best strategies for optimizing the work environment. • Propose prioritized actions with follow-up.	Action matrix
Report	Focus on the most relevant information	• Drafting of the executive and institutional report. • Creation of a mini scorecard. • Prioritization of actions and definition of indicators. • Final version and approval.	• Final report. • Executive presentation. • Platform. • Prioritization matrix. • Initial action plan.
Communicate	Communicate results	• Share the responses with your employees. This will keep them involved in the project and help them be more willing to participate in future surveys.	• Banner. • Presentation. • Platform.

Schedule

The following schedule distributes the phases over four weeks with sequential activities.

Phase	Start	Fin	Days	Days																																	
				10-nov	11-nov	12-nov	13-nov	14-nov	15-nov	16-nov	17-Nov	18-Nov	19-Nov	20-Nov	21-Nov	22-Nov	23-Nov	24-Nov	25-Nov	26-Nov	27-Nov	28-Nov	29-Nov	30-Nov	01-Dec	02-Dec	03-Dec	04-Dec	05-Dec	06-Dec	07-Dec	08-Dec	09-Dec	10-Dec	11-Dec	12-Dec	13-Dec
Review	10-nov	14-nov	5																																		
Adaptation	17-nov	21-nov	5																																		
Application	24-nov	28-nov	5

Analysis/Report	08-dic	12-dic	5																																		

- 
1. Safe working environment

2. Job security

3. Fair compensation

4. Open communication

5. Employee participation
- 
6. Recognition and reward

7. Training and development.

8. Work-life balance

9. Career advancement

10. Employee support

Methodology

The work climate survey was administered in paper format using a mark reading methodology (optical reading of responses) in order to standardize data capture, reduce transcription errors, and streamline the processing of results. This approach was selected to ensure consistency in data collection, especially in a population with shift work and diverse profiles, and to strengthen the objectivity of the analysis under a focus on confidentiality and continuous improvement.

The instrument was designed with affirmative questions and a closed response scale, presented on a mark-reading answer sheet with clearly identified fields. Response options were marked by completely shading the corresponding circle, according to instructions printed at the top of the survey. To avoid ambiguous records, it was explicitly stated that check marks, crosses, or partial markings should not be used, and visual examples of “correct mark” and “incorrect mark” were included.

The application was run in windows scheduled by area and shift, under a controlled delivery and collection mechanism to ensure orderly participation without affecting operations. To reduce authority bias or social desirability, preventive measures were established: the institutional purpose of the study was communicated, and the voluntary nature of participation and confidentiality of the survey were emphasized.

In order to protect the identity of participants and avoid individualized interpretations, the mark reading sheet did not include personal identification fields. Segmentation was performed only using non-identifiable variables necessary for aggregate analysis (e.g., gender, area, shift position, and line).

Once completed, the surveys were digitized and mailed for processing, which was carried out by optical scanning and data quality validation, including review of invalid marks, detection of atypical patterns, and consistency verification by capture batch. When responses were identified as unreadable due to incomplete or double marking, they were classified as invalid according to predefined criteria to preserve the statistical integrity of the analysis.

This method made it possible to generate a reliable and uniform database, reducing the variability associated with manual captures and reinforcing the impartiality of the results. Overall, the application of mark reading contributed to obtaining more objective information, comparable by area and shift, and useful for designing improvement actions aimed at strengthening leadership, communication, recognition, and well-being in the workplace.

Procedure

Pre-planning

- a) Confirm the objectives, scope, and reach of the survey.
- b) Validate the eligible population, areas, lines/processes, and shifts.
- c) Define application windows per shift without affecting operations.
- d) Appoint an application team and monitoring committee.
- e) Check that the questionnaire does not contain any personally identifiable information.
- f) Prepare materials and establish application and collection points.
- g) Communicate the purpose of the survey, emphasizing voluntariness and anonymity.

OMR format adaptation

- a) Verify response scale and consistency of affirmative responses.
- b) Include clear instructions on how to mark answers.
- c) Incorporate visual examples of correct and incorrect marking.

- d) Ensure that only non-identifiable segmentation variables are requested (e.g., area, shift, job level, seniority).
- e) Perform print and read tests to validate scan compatibility.

Brief training for applicators

- a) Explain the objectives of the survey and the role of the administrators.
- b) Reinforce neutrality guidelines: do not suggest answers or interpret questions.
- c) Ensure mastery of OMR marking instructions.
- d) Establish incident control and collection route.

Application by turns

- a) Present a brief and uniform institutional message:
 - * Purpose of continuous improvement.
 - * Confidentiality and anonymity.
 - * Non-punitive use of results.
 - * Voluntary participation.
- b) Distribute questionnaires and explain the scoring method:
 - * Fill in one oval/box completely for each reagent.
 - * Do not use check marks or crosses.
 - * Avoid double marks, partial marks, or marks outside the box..
- c) Ensure that supervisors/direct leaders do not collect completed questionnaires.
- d) Provide visible sealed ballot boxes for depositing surveys.
- e) Monitor participation by area/shift (count only, no names).

Collection and storage

- a) Close the application window according to the defined schedule.
- b) Remove ballot boxes or envelopes in the presence of an HR/DO manager.

- c) Count questionnaires received by area/shift.
- d) Record incidents in a logbook.
- e) Secure questionnaires in sealed envelopes labeled by shift/area.
- f) Transfer to the processing area following the chain of custody.

Digitization and OMR reading

- a) Prepare scan batches by shift/area.
- b) Scan questionnaires using standard equipment settings.
- c) Generate a preliminary database of responses.
- d) Safeguard physical originals until the report is completed.

Data quality validation

- a) Identify invalid marks (double mark, partial mark, outside the oval/box).
- b) Classify invalid reagents as "no response" according to defined criteria.
- c) Detect atypical patterns by batch (e.g., unusual increases in invalid responses).
- d) Confirm that segmentation meets minimum reportability criteria to avoid compromising anonymity.
- e) Issue the final cleaned-up base for analysis.

Acceptance criteria

- Recommended target participation: $\geq 70\%$ of eligible personnel.
- Digital database without systematic reading errors per printout.
- Reporting of results only in segments that meet the minimum group size.
- Evidence of communication and safeguarding in accordance with this procedure.

Associated records

- List of eligible population (without sensitive data).
- Schedule for implementation by shifts.
- Incident log.
- Participation control by area/shift.
- Chain of custody for questionnaires.
- Preliminary database and final refined database.
- Results report.

The company has a total workforce of **2936 employees**, of whom **2339 (80%)** responded to the survey. According to the company's classification, the following responded to the survey:

Women	Men
1282	1057
2339	

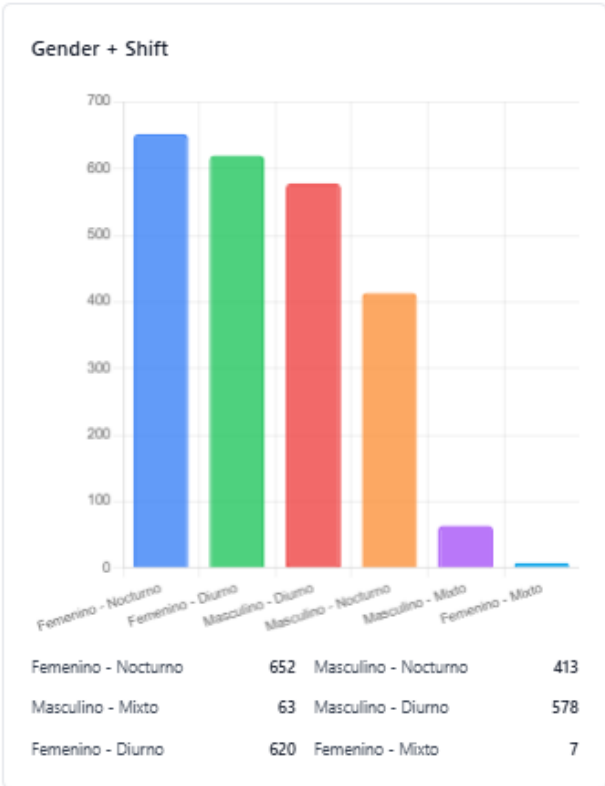

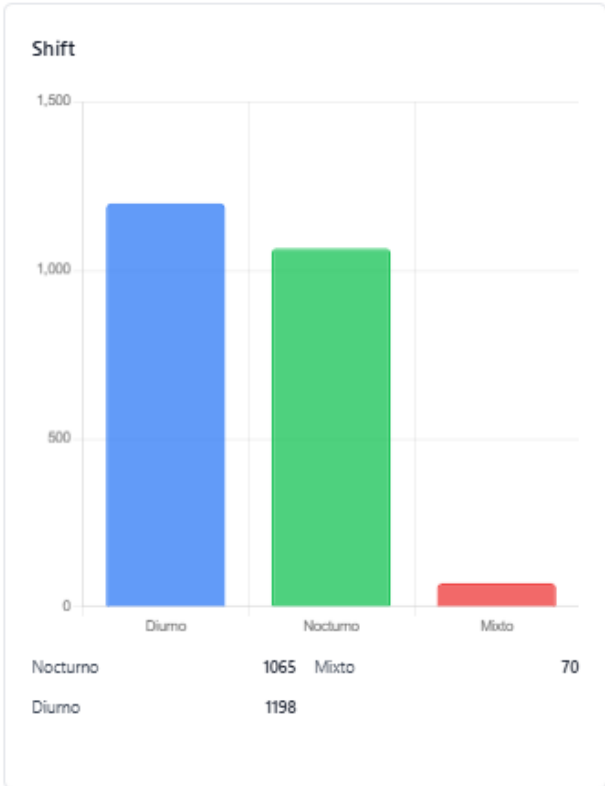

Gender

Due to the requirements of the process carried out by JAROPAMEX PLANTA 3 (automotive cutting and sewing), there are more women than men in the workforce, which is why the majority of those who responded to the survey are female.

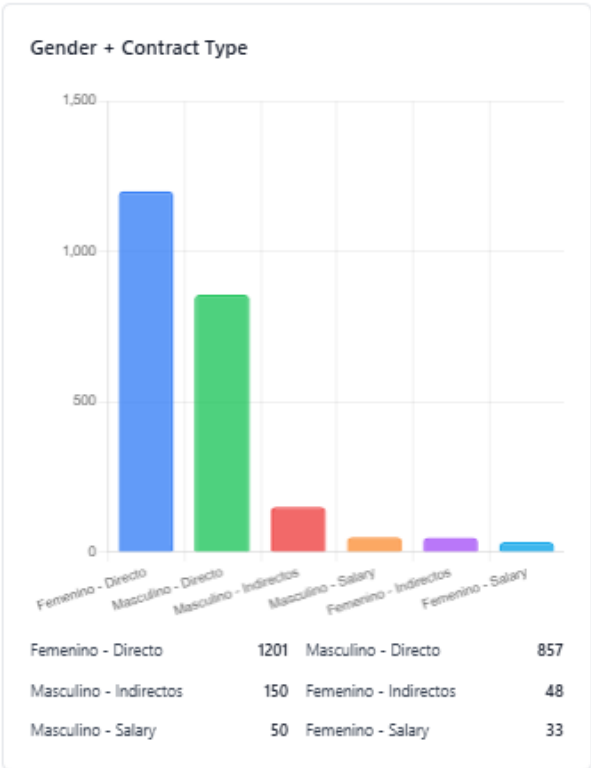

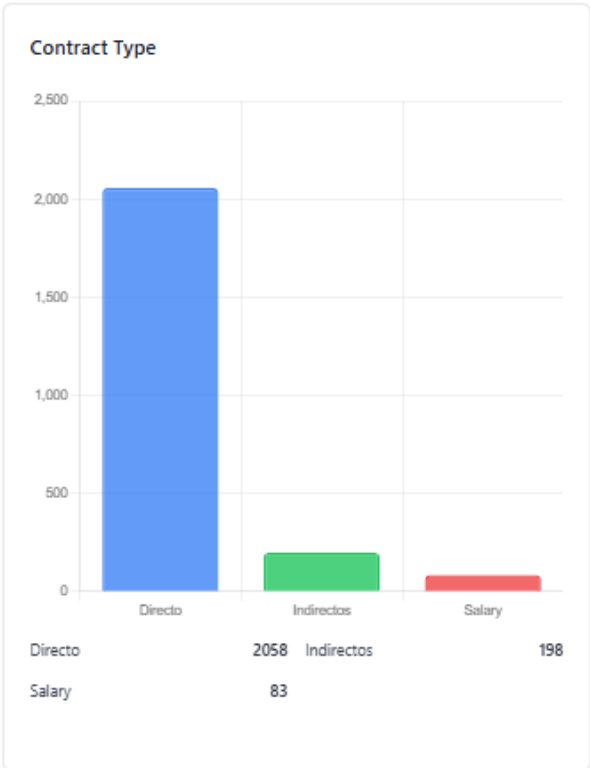

Shift

JAROPAMEX Plant 3

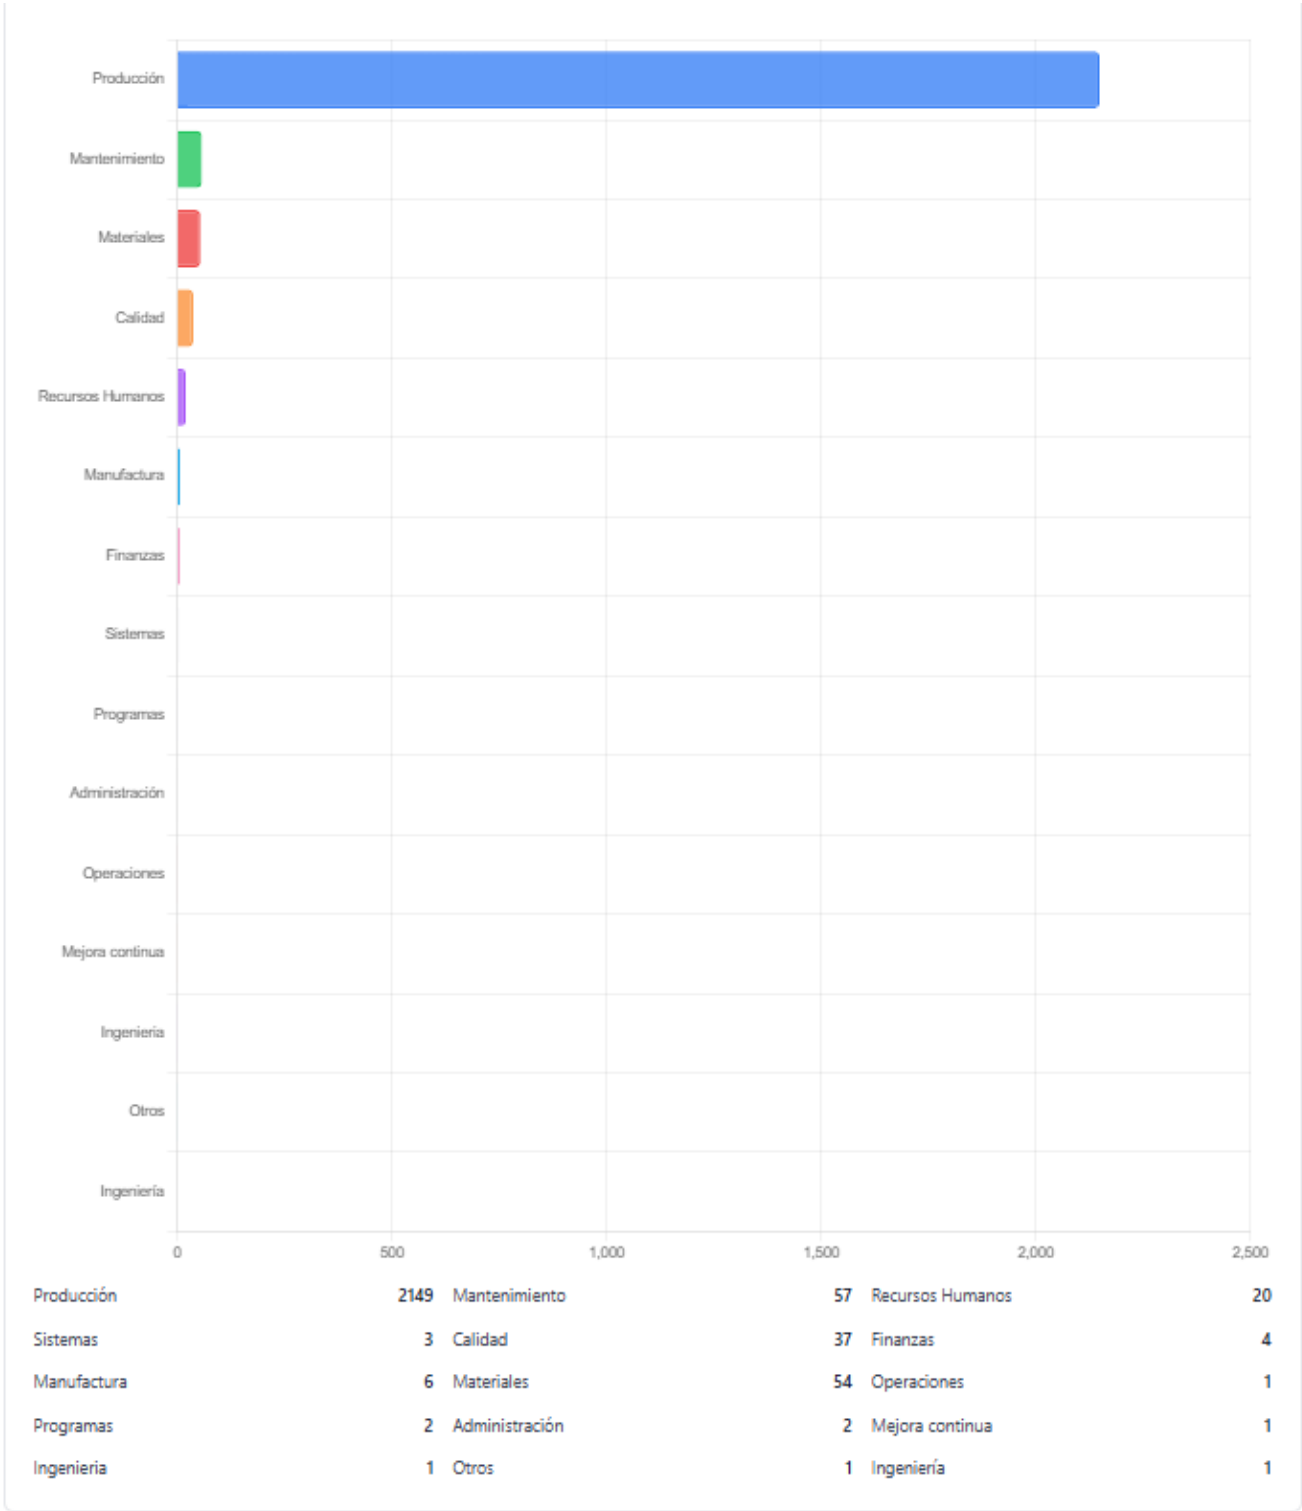

Hiring

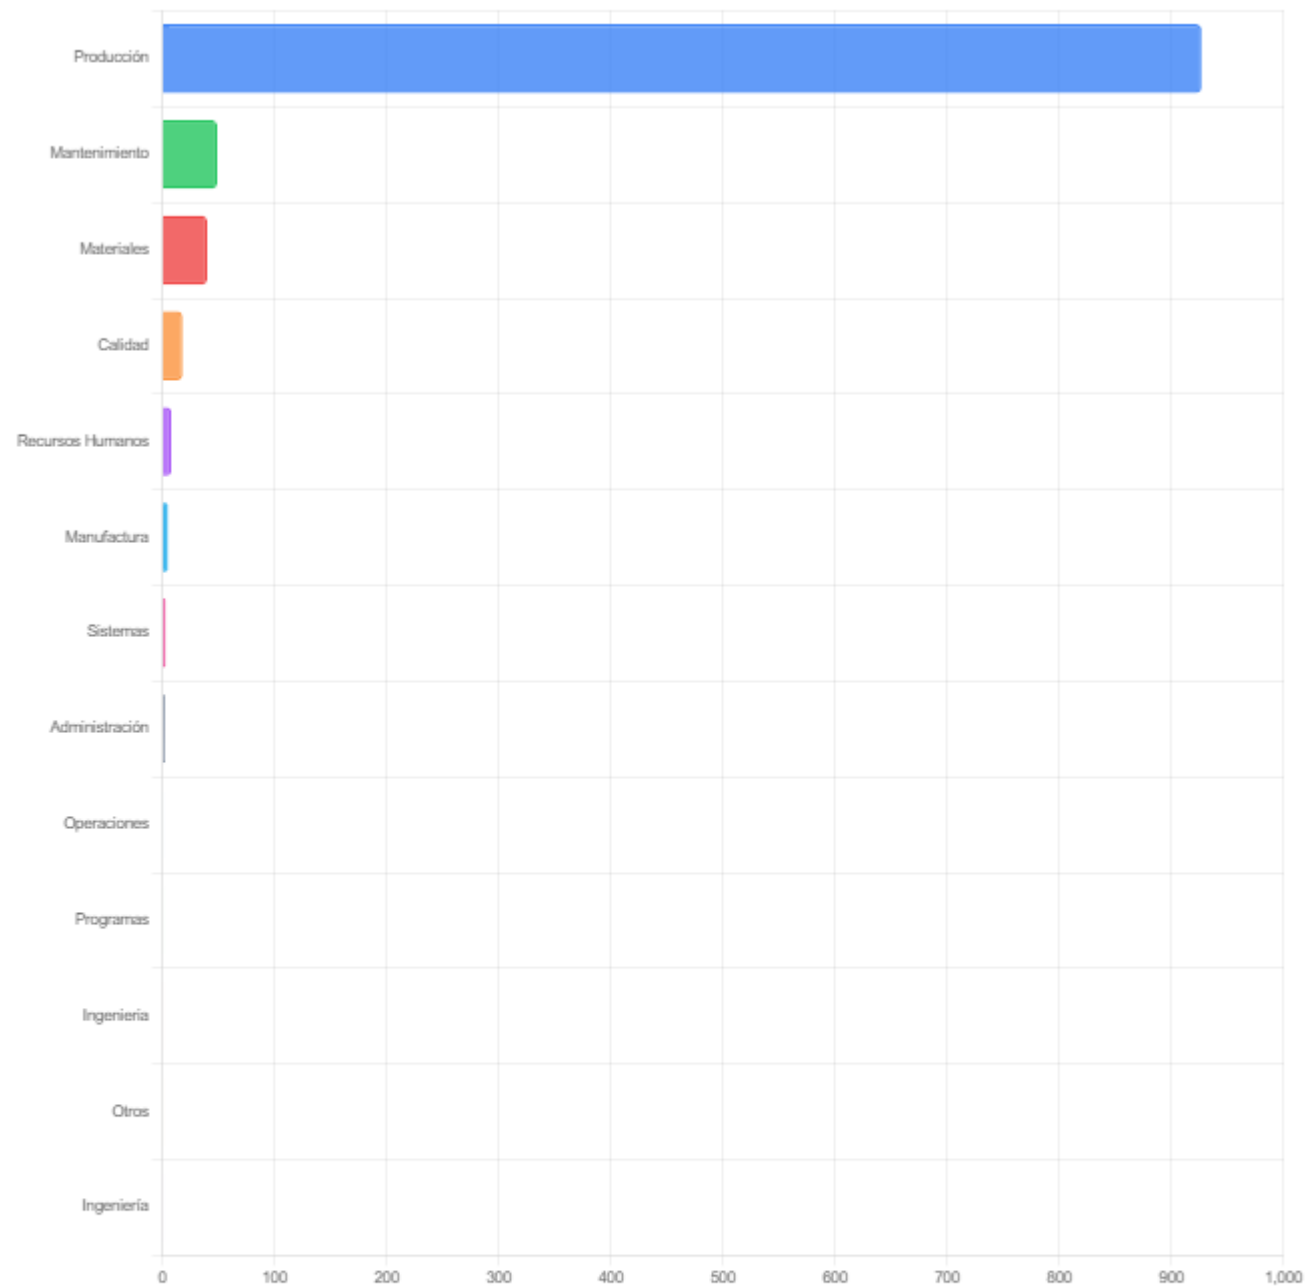

Departments

Based on the responses provided in the survey in the section on general employee data, the representative sample was distributed as follows:

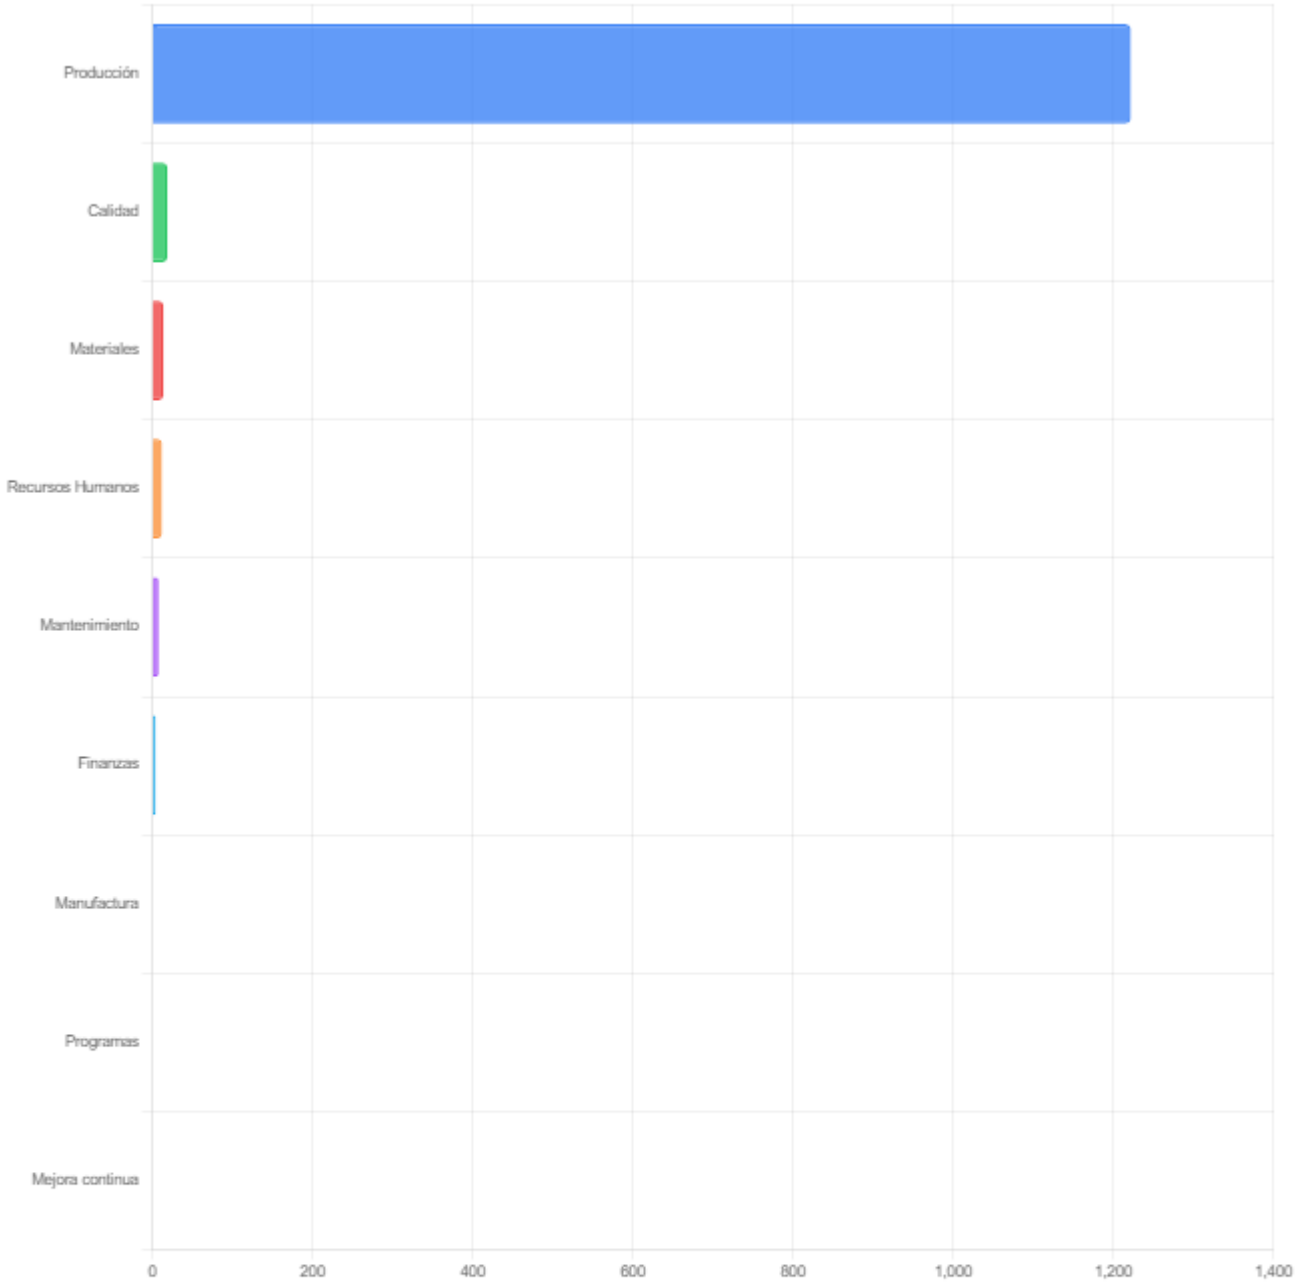

Gender (Male) + Area

Producción	927	Mantenimiento	49
Recursos Humanos	8	Sistemas	3
Calidad	18	Finanzas	0
Manufactura	5	Materiales	40
Operaciones	1	Programas	1
Administración	2	Mejora continua	0
Ingeniería	1	Otros	1
Ingeniería	1		

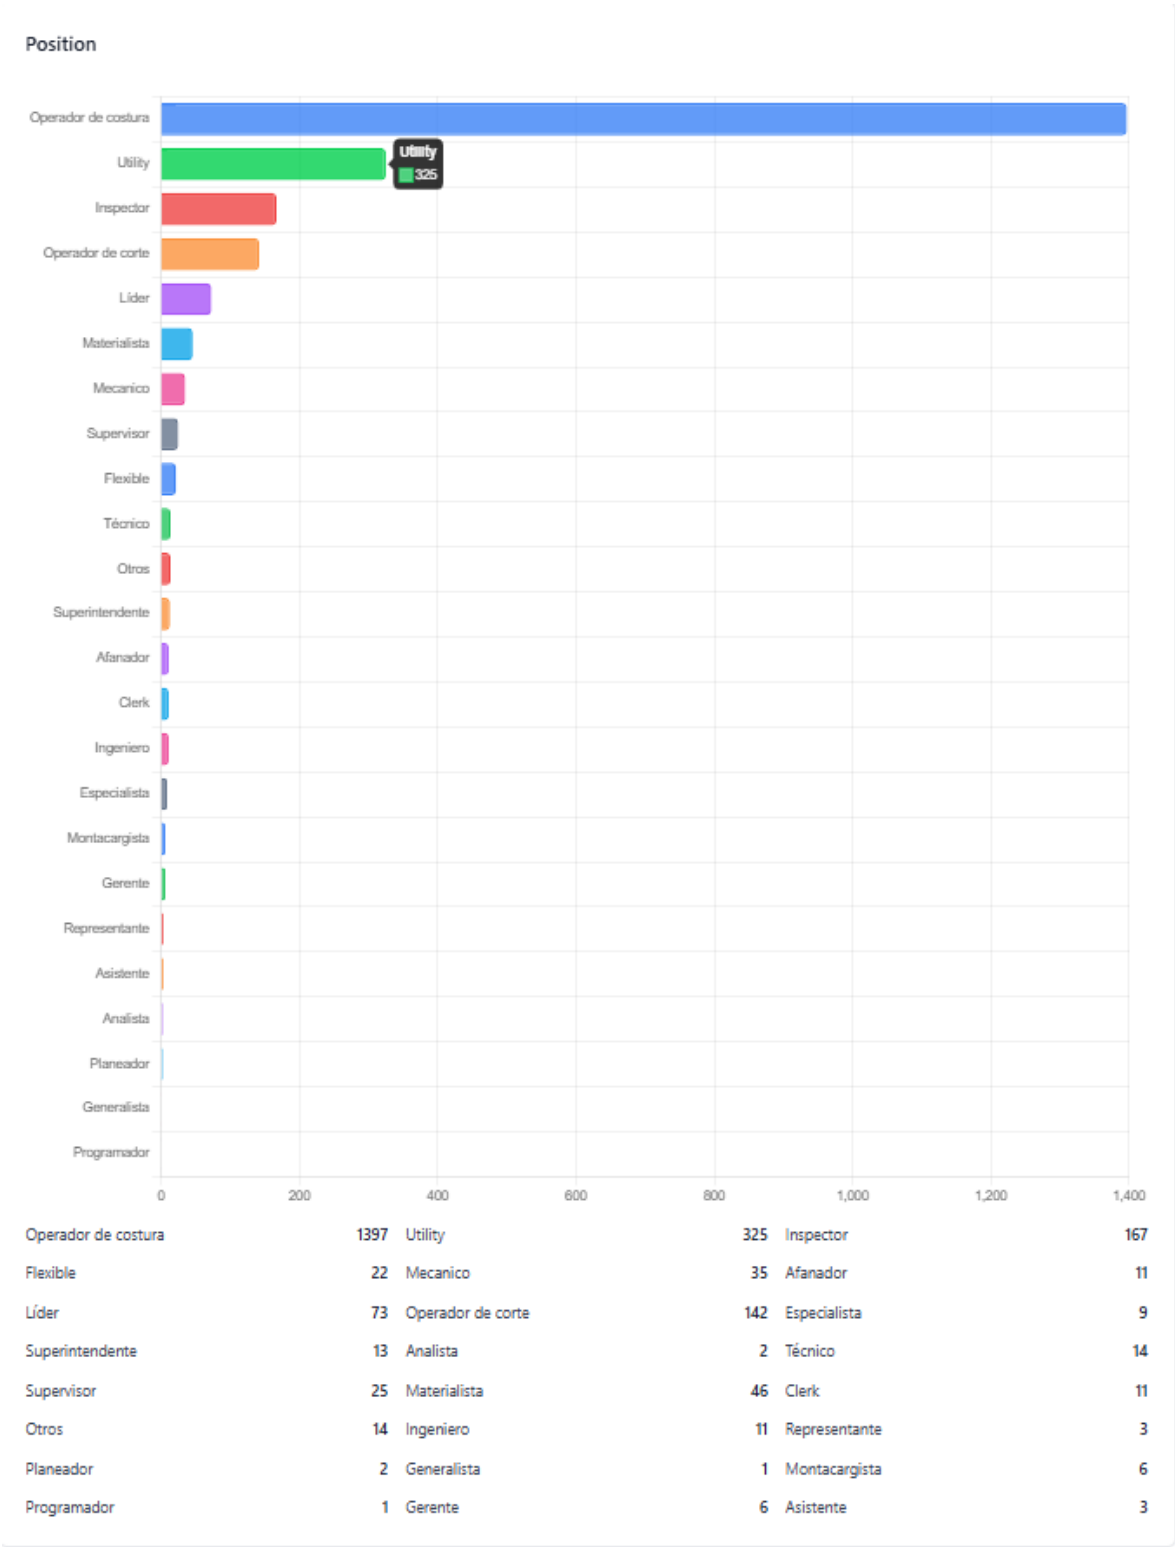

Gender (Female) + Area

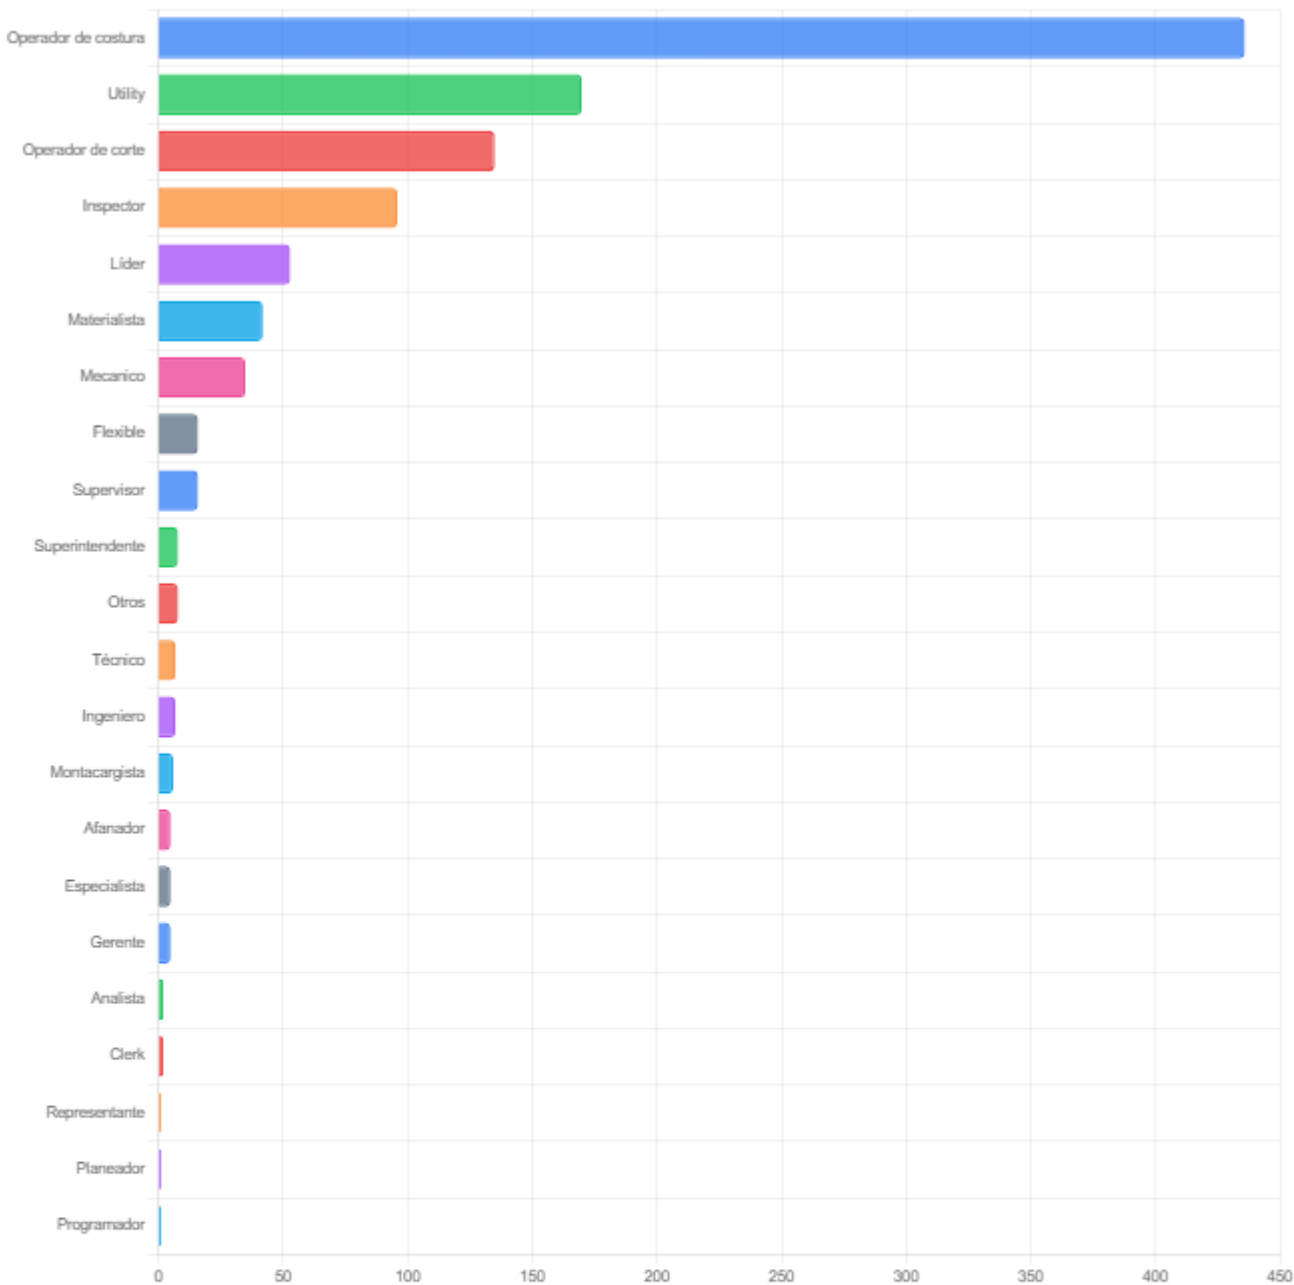

Producción	1222	Mantenimiento	8
Recursos Humanos	12	Sistemas	0
Calidad	19	Finanzas	4
Manufactura	1	Materiales	14
Operaciones	0	Programas	1
Administración	0	Mejora continua	1
Ingeniería	0	Otros	0
Ingeniería	0		

Global Position

The majority of the population surveyed was at the operational level and falls within the classification.

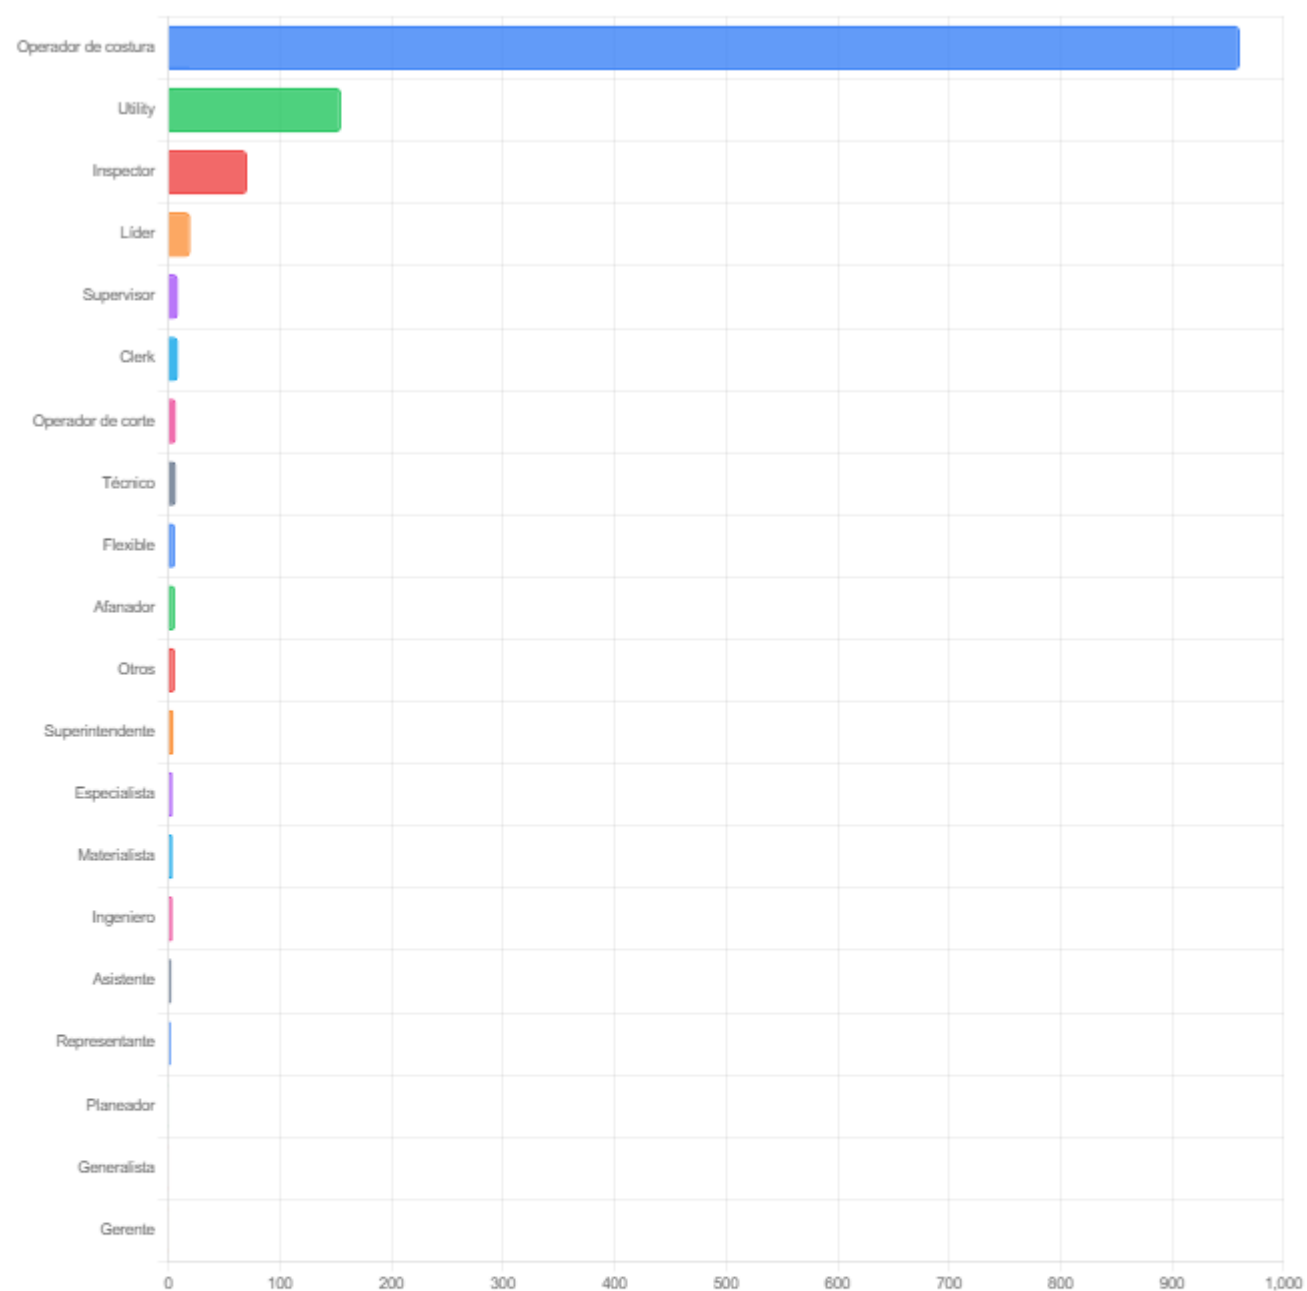

Gender (Male) + Position

Operador de costura	436	Utility	170
Inspector	96	Flexible	16
Mecanico	35	Afanador	5
Líder	53	Operador de corte	135
Especialista	5	Superintendente	8
Analista	2	Técnico	7
Supervisor	16	Materialista	42
Clerk	2	Otros	8
Ingeniero	7	Representante	1

Gender (Female) + Position

Operador de costura	961	Utility	155
Inspector	71	Flexible	6
Mecanico	0	Afanador	6
Líder	20	Operador de corte	7
Especialista	4	Superintendente	5
Analista	0	Técnico	7
Supervisor	9	Materialista	4
Clerk	9	Otros	6
Ingeniero	4	Representante	2

Quantitative Results

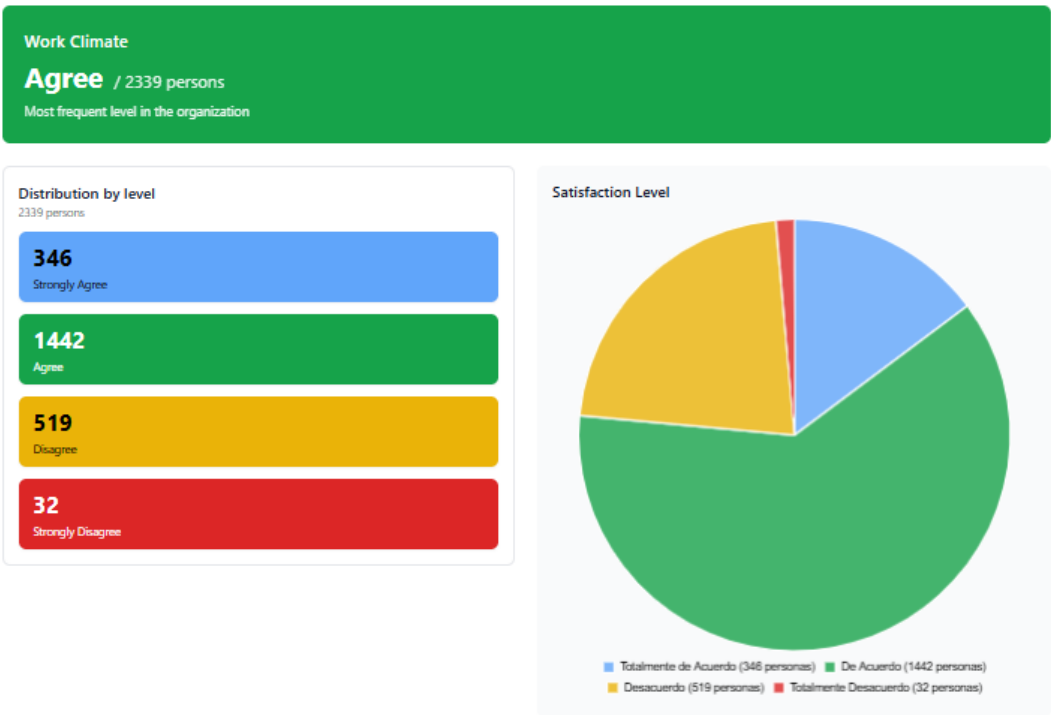

Organizational indicator

The overall rating of the organization was calculated by adding up the scores for each of the 23 statements in the survey. Employees selected one option out of four, taking into account the activities they perform within the company and department.

The following colors represent the criteria of satisfaction and dissatisfaction:

Opciones	Nivel
Totalmente de acuerdo	Muy Satisfactorio
De acuerdo	Satisfactorio
Desacuerdo	insatisfactorio
Totalmente desacuerdo	Muy insatisfactorio

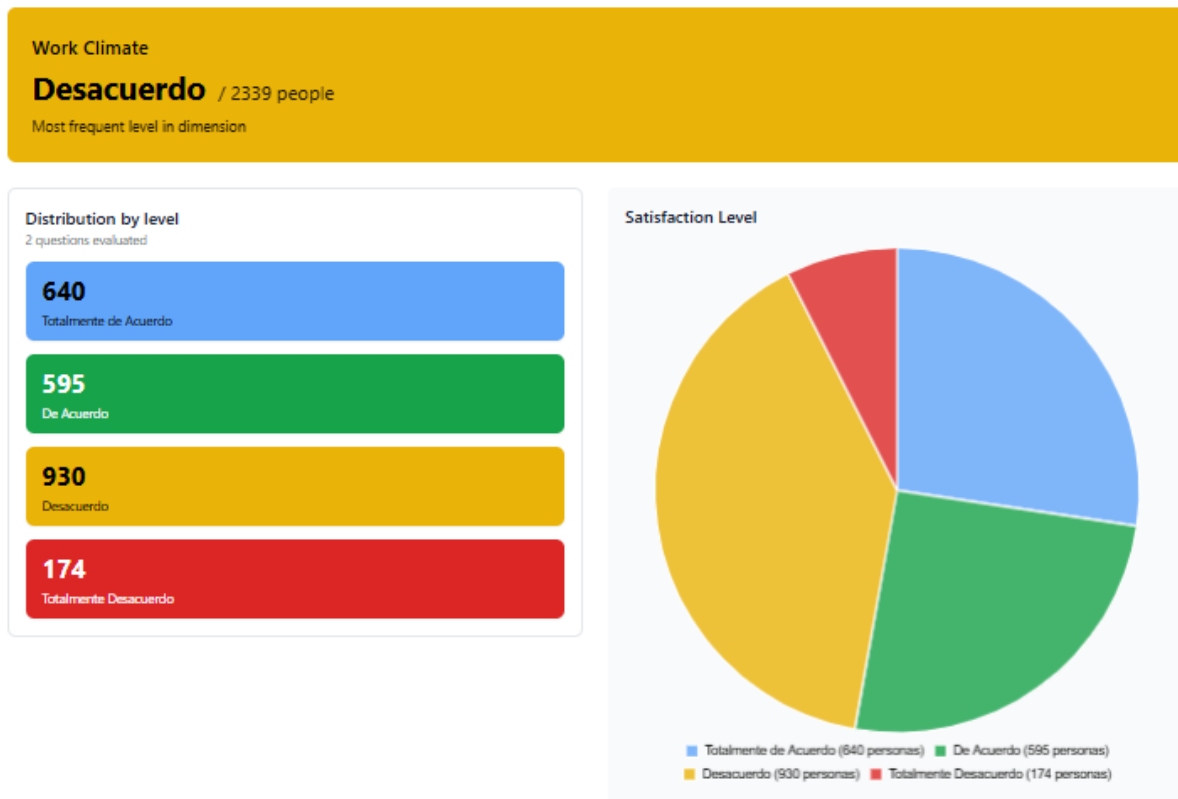

It is recommended to implement or adapt actions for unsatisfactory criteria and follow up to improve the company's good practices through an intervention program. Based on the rating results, the factor affecting the unsatisfactory rating should be determined and analyzed.

Factors (dimensions)

Safe Working Environment

Real priority for physical safety through consistent practices and leadership action in the face of organizational risks that may affect well-being (e.g., harassment, excessive overtime, heavy workloads, turnover, training gaps, or lack of work control).

Job Security

Perception of job stability and confidence in institutional efforts to maintain stability and reduce turnover.

Work-Life Balance

Reasonable shift patterns and overtime, and respectful treatment in the management of absenteeism and time off.

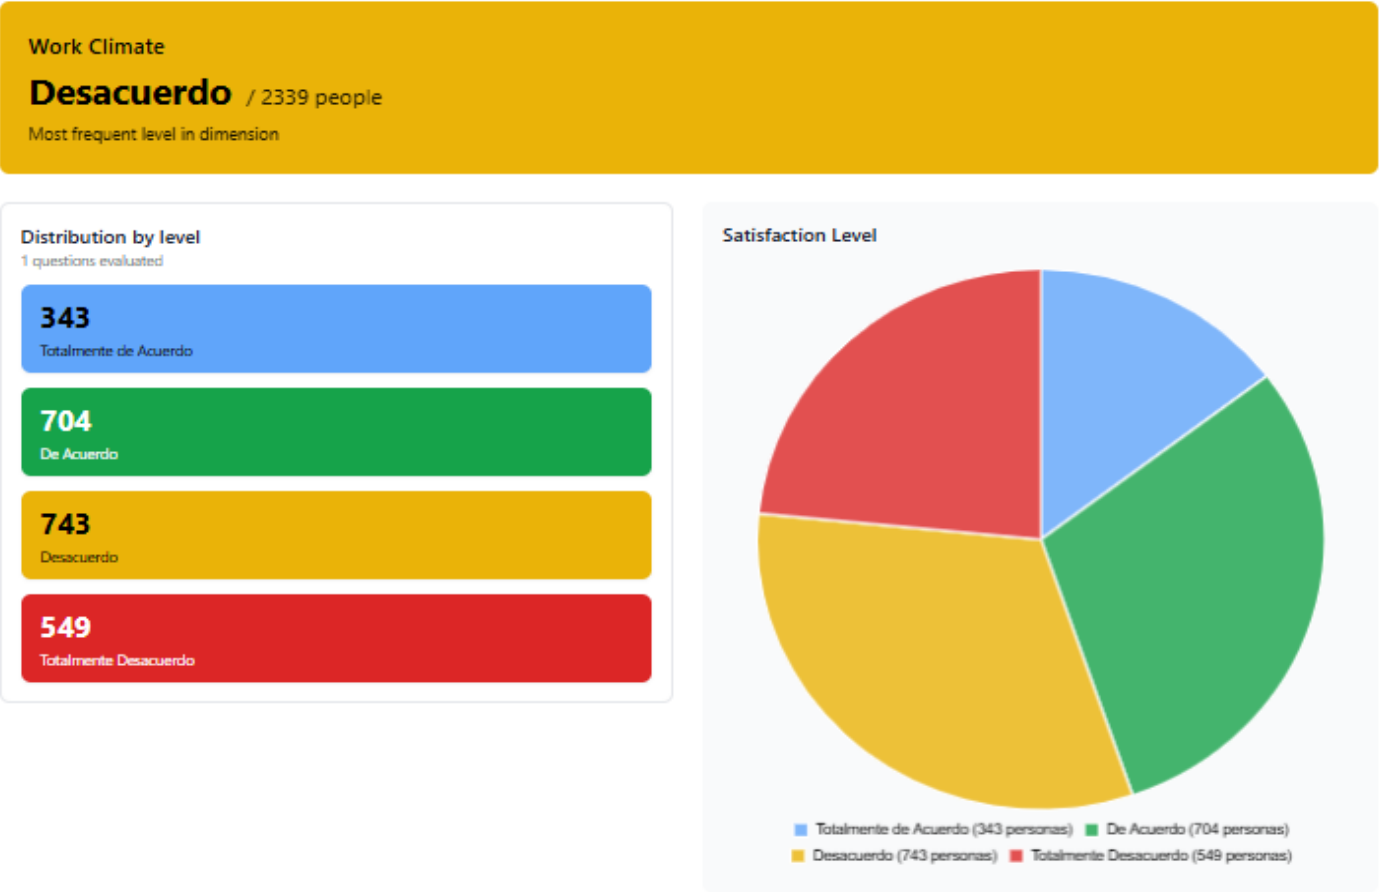

Career Advancement

Existence of clear growth paths based on skills and performance; investment in preparing staff for senior or skilled roles.

Employee support

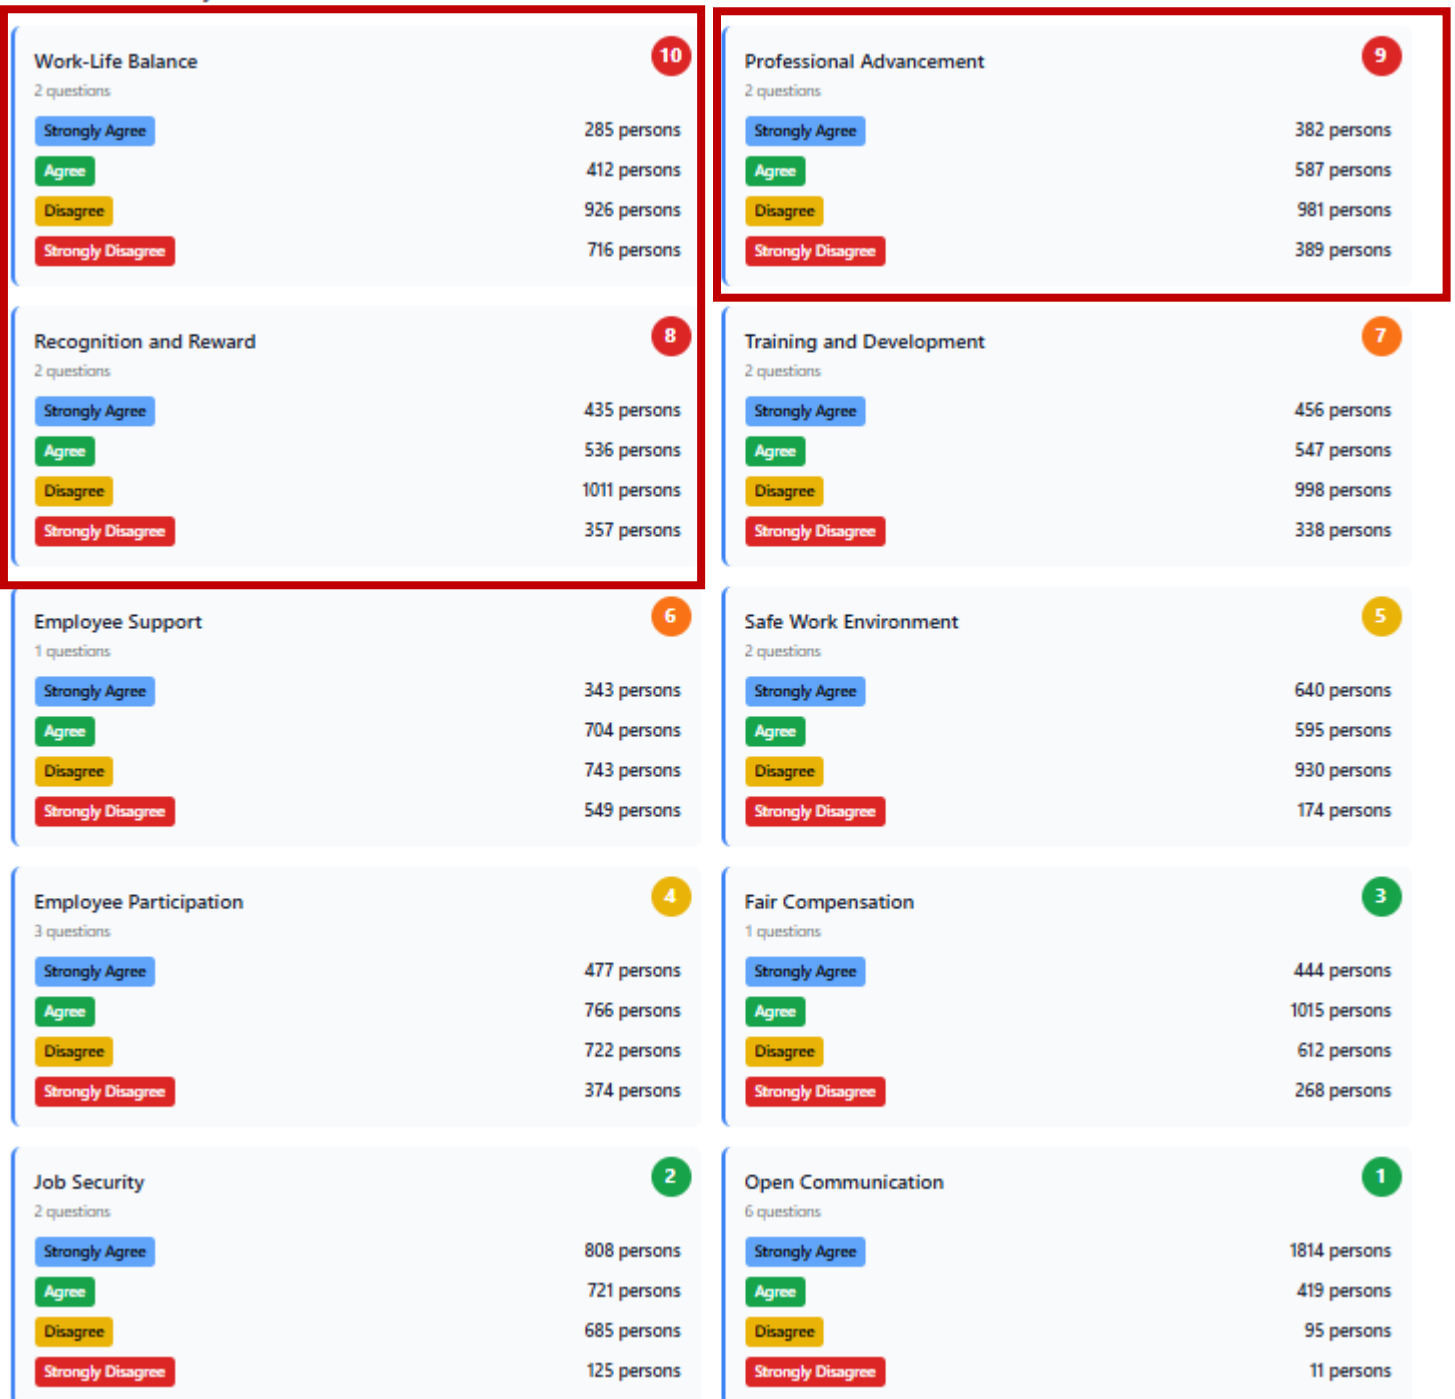

Availability of accessible support resources (e.g., counseling or assistance programs) to address personal and work challenges associated with stress, absenteeism, or turnover.

Concentrate of factors

The image shows the first three critical factors for the organization

Person Distribution by Factor

Unsatisfied level surveys

The heat map shows 23 workers in complete disagreement, indicating that they are dissatisfied with the factors being evaluated.

Statements

The analysis of statements 7, 8, 9, and 10 of the questionnaires, which fall under the Open Communication factor and focus specifically on the perception of fair treatment by key leaders. These statements are:

- 7) The Plant Manager __ treats me fairly.
- 8) The Production Manager treats me fairly.
- 9) The Human Resources Manager treats me fairly.
- 10) My supervisor treats me fairly.

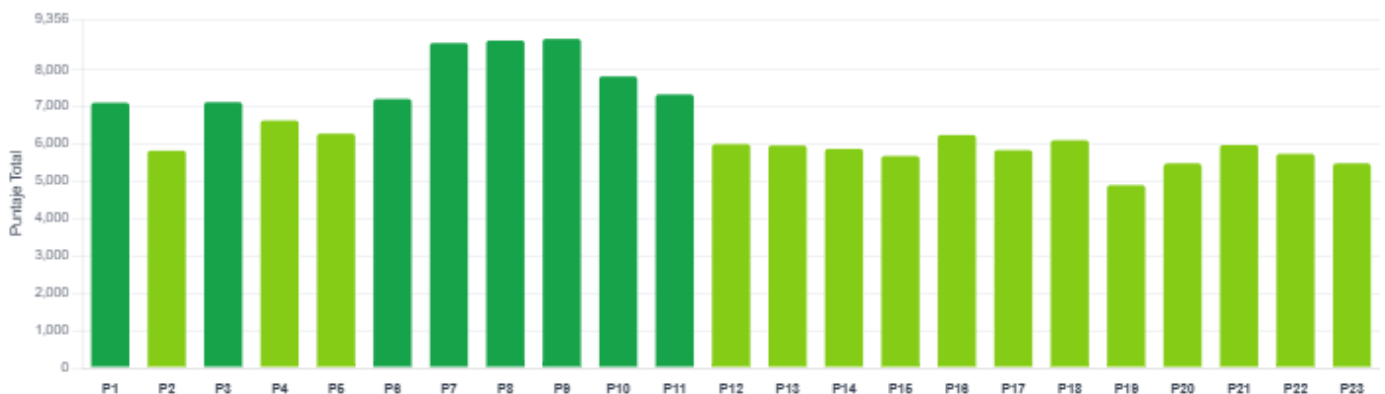

Most did not respond to these statements due to the following:

- 1. Low proximity or actual visibility of these positions for a large part of the operational staff.
- 2. Many people may not have direct interaction with Plant Management, Production, or HR, so they feel they do not have sufficient basis to evaluate "fair treatment."
- 3. Doubts about who exactly occupies the position in their shift/area.
- 4. Hierarchical ambiguity between "Supervisor" and "Team Leader."
- 5. Since the questionnaire also includes statement 11 (My Team Leader...), some respondents may not clearly distinguish the role and may doubt whether they are evaluating the right person.

Recommendations

Once the surveys were conducted, we observed areas for improvement in relation to working conditions. We have attached recommendations that can serve as collective coping strategies for important points to be developed. To this end, we consider it necessary to plan and integrate preventive strategies that aim at self-regulated and proactive achievements by identifying clear objectives. The following recommendations are intended as guidelines; implementation should be carried out by the prevention service.

Factor	Acción	Departamento
Safe Work Environment Explore whether the company prioritizes physical safety with consistent practices and whether leadership actively addresses organizational risks that can affect well-being (e.g., harassment, excessive overtime, overload, high turnover, training gaps, or lack of work control).	1. Implement a daily safety routine for each shift (brief talk + risk checklist).	Human Resources
	2. Activate anti-harassment protocol with confidential channel, investigation, and clear sanctions.	
	3. Diagnosis of workloads and overtime by line/area and phased reduction plan.	
	4. Establish a psychosocial risk committee with quarterly goals and visible monitoring.	
Job Security Measures the perception of job stability and confidence in	1. Communicate a stability plan (demand projections, hiring/adjustment criteria).	Upper Management
	2. Design retention strategy for critical roles (retention bonuses/internal mobility)	

permanence associated with company practices to maintain stability and reduce turnover.	3. Train managers in leadership based on trust and communication of operational certainty.	Human Resources
	4. Conduct exit interviews and stay interviews with root cause actions.	
Fair Compensation Assess whether staff perceive their salaries and benefits to be fair and competitive with what the industry offers.	1. Run salary benchmark against industry and region.	Compensation Management
	2. Address gaps with band adjustments and internal equity.	
	3. Make the compensation and benefits structure transparent through clear communication.	
	4. Link incentives to safety, quality, and productivity with simple rules.	
Open Communication Review the transparency and frequency of communication on relevant business and quality issues, as well as the perception of fair treatment by key leadership figures (plant manager, production manager, HR manager, supervisor, and team leader).	1. Implement weekly briefings by area/shift with goals, changes, and priorities.	Management Human Resources
	2. Establish a monthly plant communication schedule (results, quality, safety).	
	3. Train leaders in fair treatment and respectful communication with 180/360 evaluation.	
	4. Create a question and answer channel with defined response times.	

Employee Participation Determines whether employees are invited to participate in decisions that affect their work, whether their input is valued in operational and safety improvements, and whether they are involved in process/standard update initiatives.	1. Activate improvement circles by cell/line with biweekly meetings.	Continuous Improvement Production Management
	2. Implement an idea system with mandatory feedback.	
	3. Include operational representatives in updating standards and processes.	
	4. Publicly recognize improvements implemented by teams.	
Recognition and Reward Measures the perception of regular recognition for contributions to quality and operations, and the existence of rewards for reliable performance (e.g., assignments to critical roles). (Statements 15–16).	1. Launch immediate recognition program for safety, quality, and assistance.	Human Resources Supervision Communication
	2. Define transparent criteria for assigning critical roles and rewards.	
	3. Train managers in micro-recognition and specific positive feedback.	
	4. Publish a monthly board of achievements by team/shift.	
Training and Development Assess whether training is sufficient and continues beyond induction, and whether	Create a skills matrix by position and gaps by team.	Human Resources Training
	Implement an annual training plan per shift with guaranteed minimum hours.	

the company provides trainers and resources to develop key job skills.	Certify internal instructors and ensure practical materials/resources.	
	Evaluate effectiveness with competency tests and rework/incident metrics.	
Work-Life Balance Check whether shift patterns and overtime are reasonable and whether absenteeism and time off policies are managed respectfully.	Redefine overtime rules with fair rotation and caps per period.	Management
	Adjust shift patterns to reduce fatigue (planned breaks and rotations).	Production
	Establish a clear and humane process for absenteeism and time off.	Human Resources
	Monitor well-being with pulse surveys and safety metrics.	
Career Advancement Explore whether there are clear paths for growth based on skills and performance, and whether the organization invests in preparing staff for higher roles (e.g., team leaders or skilled positions).	Create and communicate career paths by job family.	Management
	Define promotion criteria based on verifiable skills and performance.	Production
	Implement a team leader development program.	Human Resources
	Post vacancies internally first and measure internal mobility.	
Employee Support Assess the availability of accessible support resources (such as counseling or assistance programs) to	Implement or strengthen an Employee Assistance Program (EAP).	Management
	Promote clear access to counseling, emotional support, and guidance.	Production
	Train leaders in early detection of stress and referral.	Human Resources

address personal and work-related challenges related to stress, absenteeism, or turnover.	Integrate regular wellness and stress management campaigns.

Open Communication	2339	2233	1814	419	95	11	106	Implement weekly briefing by area/shift with goals, changes and priorities	Establish monthly plant communication calendar (results, quality, safety)	Train leaders in fair treatment and respectful communication with 180/360 evaluation

Swot

Factor	Strength	Weakness	Opportunity	Threat
Safe Work Environment	Consistent practices and leadership that manages psychosocial and operational risks.	Prevention of workplace violence, overload or uncontrolled overtime.	Align NOM-035 programs with internal audits and preventive leadership.	Accidents, sanctions, climate deterioration and operational stoppages.
Job Security	Perception of stability and visible efforts against turnover.	Employment uncertainty that affects commitment and performance.	Retention strategies and business direction communication.	Economic volatility and talent competition.
Fair Compensation	Competitive and equitable packages.	Inequity or wage lag that fuels turnover.	Salary range review and flexible benefits.	Inflation and market/union pressure.
Open Communication	Regular communication and fair treatment from key leaders.	Rumors, perceived favoritism, low hierarchical credibility.	Standardize channels, fair leadership training.	Operational crises that undermine trust.
Employee Participation	Real involvement in decisions and improvements.	Personnel disconnection and resistance to change.	Suggestion systems and continuous improvement.	Cynical culture if contributions are not implemented.
Recognition and Reward	Frequent recognition and rewards for reliability.	Effort not valued and perception of arbitrariness.	Recognition programs and incentive routes.	Budget constraints and organizational fatigue.
Training and Development	Adequate training and sufficient resources.	Lack of leader training.	Internal academies and certified trainers.	Technological changes and high turnover.
Work-Life Balance	Reasonable shifts and respectful policies.	Fatigue, stress and disciplinary conflicts.	Shift redesign and workload balancing.	Demand peaks and productivity pressure.
Professional Advancement	Clear paths and investment in development.	Stagnation and dependence on external hiring.	Career maps and succession plans.	Competitors with better growth paths.
Employee Support	Accessible resources for personal/work support.	Unaddressed stress and increased absenteeism.	Assistance agreements and wellness campaigns.	Stigma and increased psychosocial risks.

Conclusion

JAROPAMEX S.A. DE C.V.

PLANTA 3

Period evaluated: November 2025

Date of issue: 12/10/2025

Overall objective of the study:

To evaluate employees' perceptions of leadership, communication, recognition, work organization, and well-being in order to guide decisions and improvement plans.

Analysis

1) Work-life balance (critical)

Responses point to fatigue and pressure from overtime/shifts, likely triggers for absenteeism and psychosocial risks.

Recommended actions:

- Clear rules on overtime with fair rotation.
- Adjustment of shift patterns to reduce fatigue.
- Clear and humane process for absenteeism and time off.
- Pulse surveys and safety metrics for monit

2) Career advancement (critical)

There is a prevailing perception of few clear paths for growth; this tends to increase turnover and disengagement.

Recommended actions:

- Career paths by job family.
- Verifiable promotion criteria.
- Team leader development program.
- Publish

3) Recognition and reward (critical)

There is a significant gap in effective training and training resources, with a direct risk to quality, rework, and safety.

Recommended actions:

- Skills and gaps matrix by position/team.
- Train middle managers in leadership best practices, avoiding violence.
- Certify internal instructors.
- Measure effectiveness with competency tests for internal growth among workers
